The Essential Guide to File Backup and Sharing for Construction

SugarSync

"SugarSync allows me to access all my files from wherever I am and share with whomever I wish to. It works!"

Vince Volpe, President, Custom Fireplace Design

SugarSync allows users to access and share files without requiring new workflows, equipment, or third-party vendors.

Our service is built to withstand the unique rigors of construction industry demands, yet be lightweight enough to lower the learning curve to almost nothing and fit invisibly into existing workflows. Untether your team from their computers; work without reliable connectivity (or complex connectivity solutions like VPN) from remote jobsites; and control access with fine-tuned permissioning down to the sub-folder; so project owners, client managers, foremen and architects see only what you choose.

You Can Count on SugarSync

Your Workflow, In Sync

Each individual user can choose specific folders and sub-folders to sync and access them anywhere on any of their devices, so data flows seamlessly between devices, users and jobsites; without disrupting anyone's existing folder setup.

The client manager, for example, can manage a job from a designated folder shared with the foreman. The foreman is then free to leave his laptop in his truck or at home, accessing the day's punch list and uploading site photos on-the-go from his mobile phone. It's all synced and available in the shared folder with no special effort.

Your Peace of Mind

All documents are automatically backed up in real time — no third party backup solution required. Designate any or all of your folders for backup, and selectively sync and share job related folders directly to your mobile device.

All site photos, videos, blueprints, change orders and other job-related documents are instantly synced to the cloud and updated as changes are made.

Your All-In-One Solution

Get the benefit of multiple solutions — file sharing, backup, mobile connectivity, and secure access — in a single service that can pay for itself over the course of a single job.

SugarSync does it all, while allowing your team to use their own devices and keeping user seats to a minimum (no seats are required to share files or folders of any size with clients or architects).

The Essential Guide to File Backup and Sharing for Construction

SugarSync

Recommended by 95% of SugarSync's construction clients.

Construction companies never stop moving. To adhere to fast-paced timelines and hit aggressive milestones, you must strip away delays, keep far-flung teams on the same page, and guarantee efficient communication between job sites and the central office.

SugarSync provides a solution that allows field personnel to easily update the main office on progress. Decisions can then be made and communicated quickly to direct job site personnel and update clients.

Ensure easy anytime access to data from multiple devices, anywhere.

"What used to take binders of data for five different people, can now be stored in folders on the server and the folks access it, when they need it! They don't have to lug around the big binders and we don't have to update them."

Jody Morrissey, JPA Landscape and Construction

Provide updates and receive approvals from clients and architects.

"Simple solution to increase field productivity while providing greater information sharing amongst the team and ultimately reducing job site risk."

Tom Potts, Partner, Becks Concrete Construction

Enable always-on backup protection for reliability and peace of mind.

"I've been very pleased. SugarSync helps us keep track of the data that's on everyone's laptops and provide them with access to that data when they are away from their laptops. That access has proven to increase our users' desire to ensure that their data is indeed backing up."

James Amlicke, COO/CFO, SBI Builders

Get photos from the jobsite to the office in real-time via already-owned mobile devices. Then, provide blueprints, punch sheets, change orders and more back to the jobsite.

"SugarSync provides our staff a means of accessing data remotely, and permits staff in the field to post data back to engineers in the office. The ability to specify which folders are synced and their location on each synced computer is an advantage. Any queries have been dealt with swiftly and efficiently."

Andrew Mearns, Director, Cantech

About SugarSync

Embraced by users and endorsed by SMBs across the world, SugarSync empowers mobile teams and organizations to get business done faster from any device anywhere. Brands such as Staples, Fujitsu, France Telecom-Orange, SoftBank Mobile and more have selected SugarSync as a partner to bring cloud storage and file sharing services to their customers. For more information, please visit SugarSync.com. Founded in 2004 and headquartered in Silicon Valley, the company is privately held and backed by major investors.
